

NorthPeak Robotics — Shareholder Letter, Q1 2026

To Our Stakeholders,

This has been a defining quarter for NorthPeak Robotics. Our Hardware division delivered revenue of \$4.2 million, marking a substantial increase from the prior quarter. The Software division, while smaller in absolute terms, grew impressively to \$2.8 million in revenue, driven largely by new subscription contracts signed in March. Meanwhile, our Services division posted revenue of \$1.6 million, roughly flat compared to last quarter as we invested heavily in staff training rather than billable engagements.

Looking at profitability, Hardware contributed an operating profit of \$890,000, while Software achieved an even stronger margin with \$760,000 in operating profit despite its smaller revenue base. Services, as expected given the investment period, operated at a modest loss of \$120,000 for the quarter.

We are optimistic about the coming quarter and believe the foundations laid across all three divisions will translate into stronger consolidated results.
